Resource portfolio management

INTRODUCTION

- EOSC Profiles v3.0 Compatible
 - Holds required information
 - Data entry assistant
-

What is a resource?

*A way to provide value to a user/customer through bringing about results that they want to achieve
(FitSM definition for service)*

Current State

- Commoditization of digital resources
- XaaS (Anything as a Service)

Factors for Successful Resource Management

People

- Skills
- Awareness
- Responsibilities

Technology

- Support people in their roles
- Increase process effectiveness and efficiency

Processes

- Defines Activities
- Effectiveness and repeatability

Resource management in Research

PROS ↑

- Skillful personnel
- Cutting edge Technology
- Quality Resources

↓CONS

- No training in resource management
- No marketing department
- Lack of clearly defined processes

Benefits

- Increase the user base
- More scientific communities, industry, gov, citizens, etc.
- Shared language
- Harmonise the Resources provided by European Providers
- Become user-oriented
- Identify overlapping efforts
- Speed up innovation with the increased competition

How to onboard on ni4os?

Providers & Resources

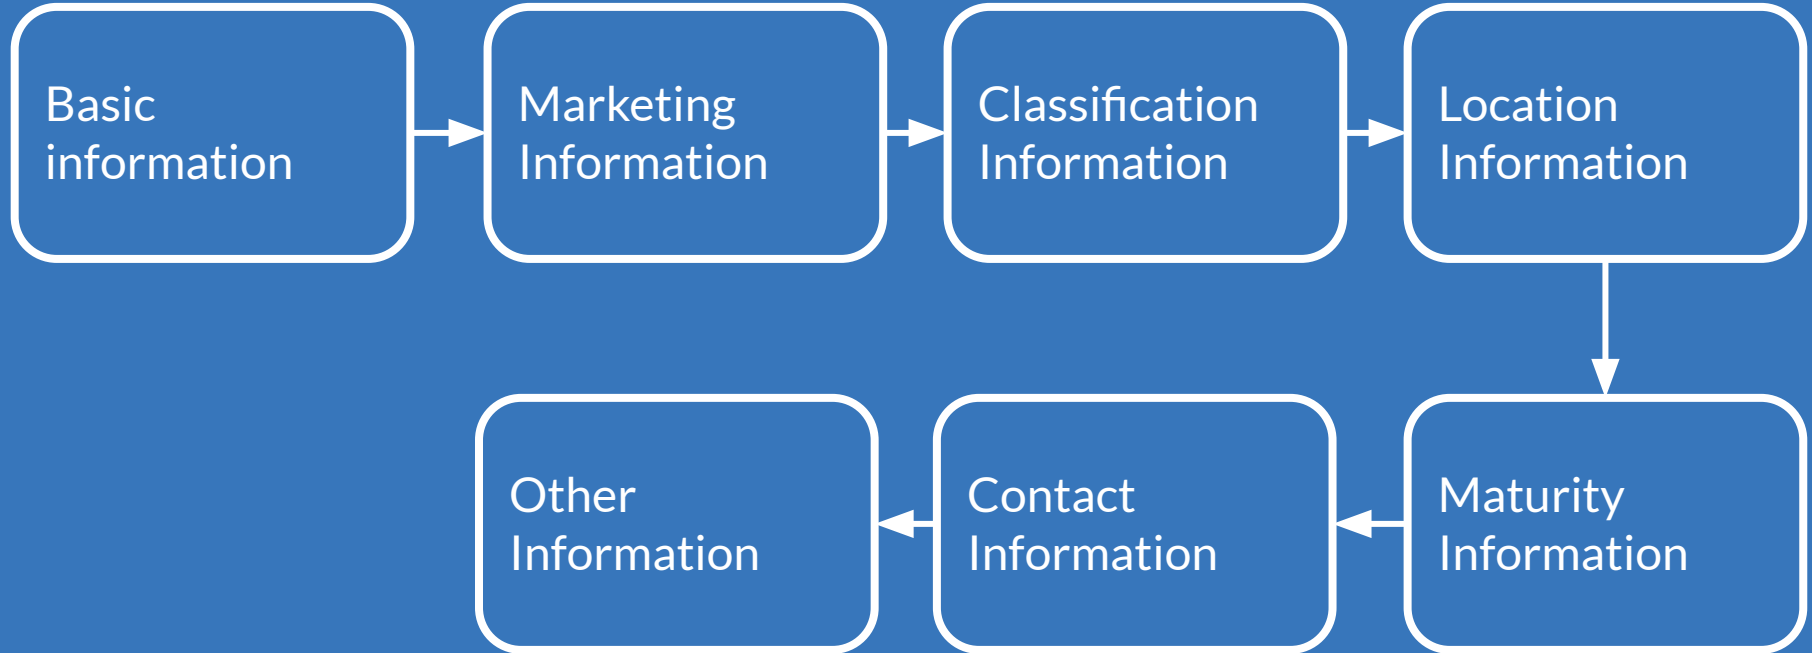

EOSC Provider

EOSC Providers are organisations, a part of an organisation or a federation that manages and delivers Resources to End-Users.

- Resource Providers
- Service Providers
- Data Providers
- Service Developers
- Research Infrastructures
- Resource Aggregators
- Cloud Providers

Provider onboarding process

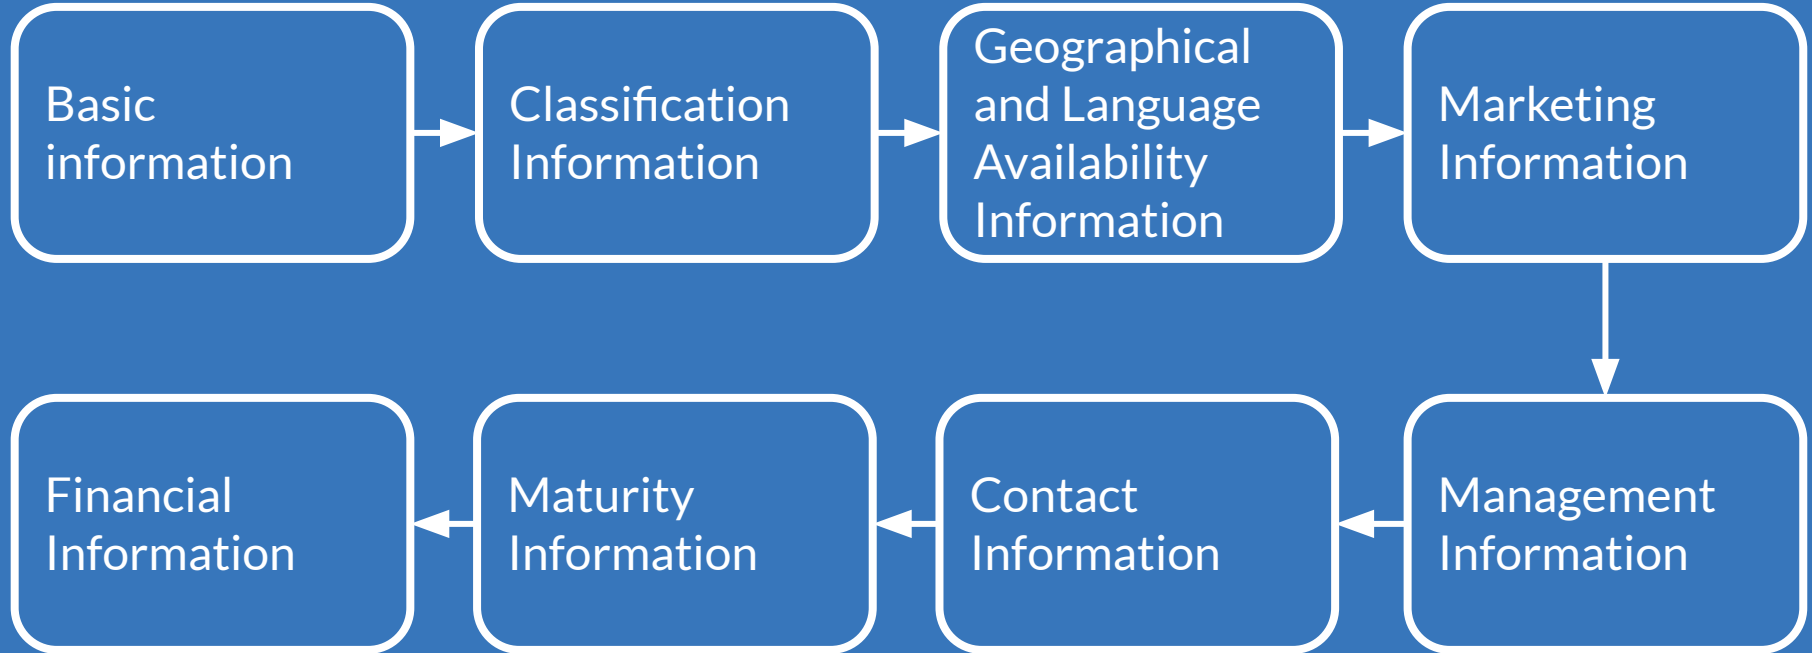

EOSC Resource

EOSC Resources are any asset made available by means of the EOSC system and according to the EOSC Rules of Participation to EOSC End-Users to perform a process useful to deliver value in the context of the EOSC

- Services
- Data Sources
- Research Products
- more...

Resource onboarding process

Onboarding Criteria

PROVIDER

- Legal entity or affiliated with one
- Provider should ensure the service is delivered
- In case of a collaborative resource the lead provider must onboard the resource

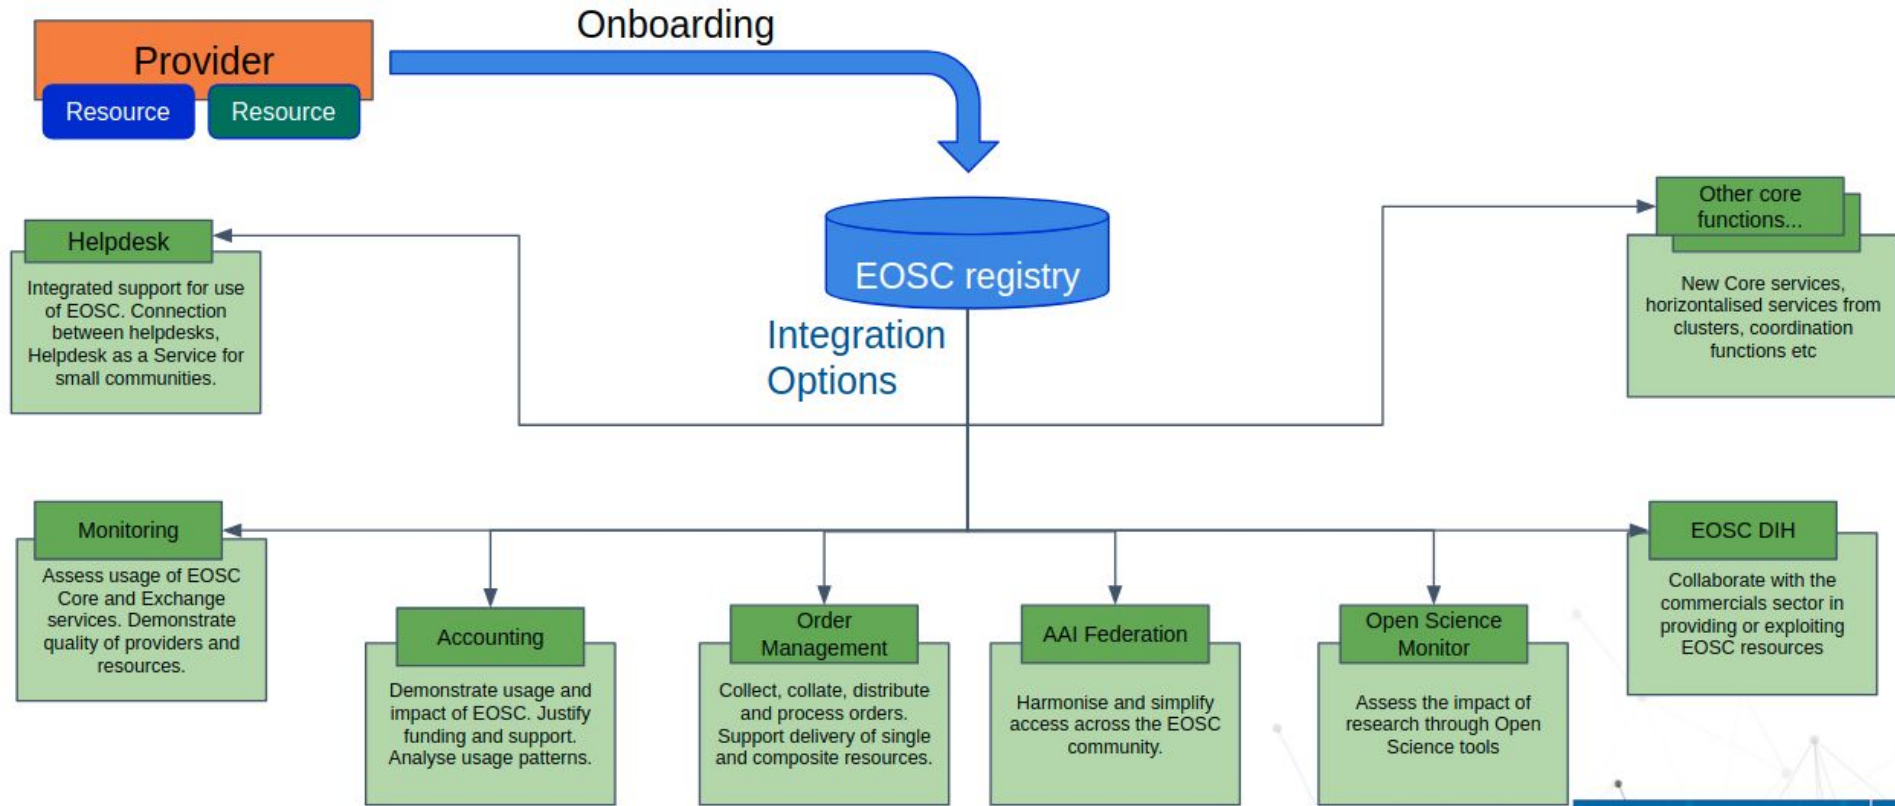

RESOURCE

- Live Service
- Not a paper
- Not a functionality
- Technology Readiness 7 or above

Privacy statements, terms of use and Service Level Agreements, Specifications and Descriptions must be available in English

Why to onboard?

EOSC integration and added value

Description

GRNET – National Infrastructures for Research and Technology, provides networking and cloud computing services to academic and research institutions, to educational bodies at all levels, and to agencies of the public, broader public and private sector. It is responsible for promoting and disseminating network and computing technologies and applications, as well as for promoting and implementing Greece's Digital Transformation goals. Thus, GRNET leverages the educational and research activity in the country, towards the development of applied and technological research in the fields of telecommunication networks and computing services.

Marketing information

[Description](#)

NI4OS Repository Service (NRS) is the main storage service of a community that holds "Regional Community Datasets". The NRS is also the platform to host all kinds of additional data such as publications (and their associated data), software (or references to software), workflow descriptions (e.g. how to generate research data) or even materials targeting the general public. (e.g. images, videos etc.) NRS is integrated with a persistent identifier service as an assigned PID is required for each digital object (item, collection, community).

The repository service allows NI4OS-Europe users to deposit and share data via a user-friendly web interface. It can host publications and their associated data or software. It automatically generates a Persistent Identifier for each shared item. Access to shared items can be public or limited to selected repository users.
