Στόχοι των συστάσεων του OpenAIRE

- Βελτίωση διαλειτουργικότητας μεταδεδομένων
- Υποστήριξη FAIR Data αρχών
- Περιγραφή διαφορετικών τύπων ερευνητικών αποτελεσμάτων με τον καθορισμό διαφορετικών «προφίλ»
 - Επαναχρησιμοποίηση υπαρχόντων προτύπων (Dublin Core, DataCite)
 - Επαναχρησιμοποίηση και εμπλουτισμός (όπου χρειάζεται) υπαρχόντων λεξικών και οντολογιών (πχ. Τύποι PIDs)

Select guidelines

You may apply two types of compatibility tests on your repository:

- Content: specific to the content/format of the dc fields
- Usage: specific to the implementation of OAI-PMH

You may select from a predefined set of rules (OpenAIRE for Literature Repositories, OpenAIRE for Data Archives) or customize them according to your needs.

Select parameters

You may define an upper limit on the # of records tested. This is highly recommended for first time users, or when re-checking after the implementation of automated changes.

Select one of the repository's/journal's exposed sets.

You may also group your results by a specific field. This is quite useful when validating an aggregator and you know in advance which is the field that distinguished among data sources.

Author(s): Santos, Maria João Martins | Ferreira, Paula Varandas | Araújo, Maria Madalena Teixeira de | Araujo, Madalena | Paula Ferreira

PID(s): 10.1109/eem.2016.7521262 (doi)

Abstract(s):

Renewable energy sources (RES) are becoming the main players for the sustainability of the planet and achieving a 100% RES energy system has been attested as a good strategy to go forward in many countries. This target however defies the system to integrate highly variable RES in a system that does not allow for shortage on the energy supply. This work presents a possible 100% RES scenario for an electricity system close to the Portuguese estimating and analysing the economic and technical impacts. The sensitivity of the results to aspects related to RES availability, electricity demand, peak load and interconnection capacity for electricity trading were also analysed. The results highlighted the excess of electricity produced in 100% RES systems and the importance of including interconnection capacity to contribute to overcome this problem. The authors wish to acknowledge the support of ALGORITMI research Centre at University of Minho. This work has been supported by COMPETE: POCI-OI-0145- FEDER-View more...

Marketing Information

[ERP.MRI.1 - Description](#)

HELIX Data is one of the services provided by the Hellenic Data Service. Hellenic Data Service, also known as HELIX, is a data catalogue and repository supporting knowledge management and scholarly communication in Greece that facilitates responsible research conduct while easing compliance with Open and FAIR practices in the Greek research area. Moreover, HELIX succeeds in linking digital assets of publications, data and processes together thus a European data economy of added value services and return on investments through improved research exploitation. HELIX content and tools are inclusive to all, from individual researchers and research communities to SMEs, as long as the licenses of the given/selected artefacts permit it, for research as well as educational or experimental purposes. HELIX Data was developed according to the principle of interdisciplinarity to serve the (complex) research formats and standards and applies open and interoperable solutions for the sharing and preservation of its content in the long-term. Most importantly, HELIX encourages reuse and, since it is still a work in progress, at a later stage publishing and RDM for its users.

[ERP.MRI.2 - Tagline](#)

A data catalogue and repository, with a dual role in storing and preserving data that are self-deposited by researchers and in harvesting data records from other national data sources and catalogues, such as HARDMIN.
