EOSC entry points

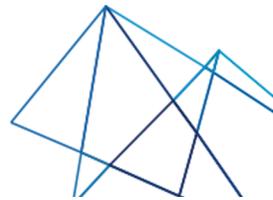

EOSC Portal

e-Infrastructures

Regional and Thematic portals

Project-oriented catalogues of services and resources

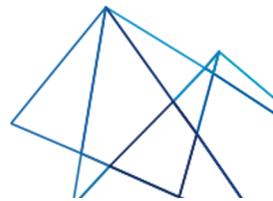

EOOSC Portal

- **Universal entry point**
- to effective and efficient services, data and resources
- to perform science in a
 - collaborative,
 - open and
 - cost-efficient way
- for the benefit of society and the public

Components

Content component (<https://eosc-portal.eu/>)

- updates on EOSC, projects contribution, relevant European and national policies, documents, tutorials and support materials...

Provider component aka Providers Portal (<https://providers.eosc-portal.eu/>)

- providers can register their profile and onboard resources into the EOSC Catalogue

User component aka EOSC Marketplace (<https://marketplace.eosc-portal.eu/>)

- The user interface for researchers to find and access a wealth of services and resources, onboarded into the EOSC Catalogue.

EOSC Portal - A gateway to information and resources in EOSC

The European Open Science Cloud (EOSC)

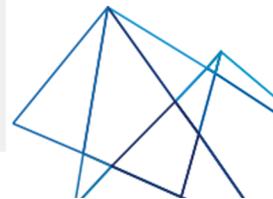

Providing 1.8 million European researchers and 70 million professionals in science and technology a virtual environment with open and seamless services for storage, management, analysis and re-use of research data, across borders and scientific disciplines.

ABOUT

DETAILS

REVIEWS (0)

GRNET (National Infrastructures for Research and Technology) provides high performance computing resources to the Greek and international scientific and research communities in order to conduct scientific research. It is a typical HPC system.

All compute nodes are used through SLURM resources/workload manager, they are not directly accessible by end user and they haven't internet access. All compute jobs run through SLURM. Access to the system is allowed only via SSH from specific IPs/networks to login nodes from which all data management/transfers, job submission etc. are performed. Only local LDAP authentication is supported.

Authorization to use each partition, run limits, budget, accounting etc. are handled by SLURM. System has total 2 PB (raw) shared storage (gpfs) with usable, after raid etc. capacity of 1.4 PB splitted in three partitions with tuning for different types of storage usage.

It supports large number of applications, optimized for each partition hardware. Software is organized via environment modules. It supports containers (ONLY singularity). Its average yearly usage is 86.6% during last year – including downtimes.

Final details

This resource can be ordered via EOSC Marketplace. Once the information provided in the details of the underpinned Project is verified, the resource will be delivered to you by the resource provider.

To access the resource:

- Place an order to request access
- You will receive the summary of your order via email
- You will be contacted by the support team once the resource is ready for you to use

Your resource request status changes can be tracked in the project's dashboard. To find out more about Projects in EOSC Marketplace, please refer to our [FAQ](#)
